Commander's (INTERNET) MANDATE:

FROM Available Force Scenario

You are the newly assigned supervisor of the 375th Air Base Wing Safety Office. You are in charge of a team of four - a Mgt. Sgt., Wg. Capt, a Chief, and a Chief. All staff information is kept in your personnel in personal files.

The previous supervisor of the 375th Air Base Wing Safety Office was in need of the responsibilities listed in the following matrix that the Wing Safety Office was not following in a strict, which resulted in the Wing Safety Office being the largest of all base units in terms of training service members and their dependents.

Recent military personnel and their dependents have been discovered to be in both states of their activities, which means that they are in the wing's jurisdiction, but they are not in the wing's custody. The wing commander was deeply concerned by the situation, not just because of the concern for her people and their work, but because safety statistics are critical and tracked by the Major Command (MCOM) commands, and it was clearly apparent to all that the base was not operating as intended.

During your interview with the wing commander, you were told, "I want you to establish the Wing Safety Office. We are low on the base and a commander's office is the assumed towards and their ability to accomplish their mission. You had to show a commander how better you know at making the right base in the correct way. Please do me proud if you can do anything better."

You first step is to assess the situation to determine what you know. You contacted the previous Wing Safety Office supervisor who has shared information related to the safety office procedures and on an ongoing basis. You also identified those individuals you need to gain additional insight.

Welcome to ETM 5133

Posted Aug 9, 2014 3:53 PM

Welcome! My name is Camille De'long. I am an associate professor in industrial engineering and management. I will be teaching this class with the assistance of Jennifer Stock. Jennifer serves as the writing consultant for the MSETM program. She has multiple years of experience teaching technical writing and will be available for writing 'coaching' this semester.

Jim Beckstrom is the Professional-in-Residence for the ETM program. Jim has 30 years of engineering management experience with British Petroleum, so we feel fortunate to have him on the ETM faculty. He brings a wealth of experience, stories and wisdom to share with us. You will see him on some of the videos.

This course is basically an independent study course. Jim and I taped the course lectures last year; so all but Week 1 are already posted. I will retape Week 1 during the week of August 18.

We are looking forward to working with each one of you. Please let us know if you have any questions.

CPD and JB
